1.0: Summary

Perrys East Midlands T/A Advance Accident Repair, from this point on shall be referred to as Perrys Advance Accident Repair, is an accident repair centre, providing a full range of services in vehicle collision and body repair. Undertaking work from private individuals, fleets, management companies and insurers, the scope of repairs range from passenger vehicles up to light commercial vehicles. Services include, but are not limited to, collision repair, wheel rim repair, dent repair/ paintless dent removal, air conditioning, vehicle diagnostics, paint scratch repair, glass replacement, tyre installation and wheel alignment.

In 2023, Perrys Advance Accident Repair achieved carbon neutrality for Scope 1 and 2 emissions and Scope 3 emissions estimated to be 1% or more of the total carbon footprint^{1*} (with the exception of those that fall under the scope of the customer), for the baseline year 1st January 2022 – 31st December 2022. The current commitment to maintain the status of carbon neutrality extends to 2023. This report, referred to as the Qualifying Explanatory Statement (QES), contains all the relevant documentation to support Perrys Advance Accident Repair's commitment to and claim of achieved carbon neutrality as defined in PAS 2060:2014.

^{1*}Where accurate consumption data was available for scope 3 emissions which equate to <1% of the total footprint (e.g. weight, kWh etc). This is still included to represent the reliability of the data and prevent underestimation of the total carbon footprint.

2.0: Carbon Neutrality Declaration

"Carbon neutrality of Perrys Advance Accident Repair's Scope 1 and 2 emissions and Scope 3 emissions estimated to be 1% or more of the total carbon footprint (with the exception of those that fall under the scope of the customer), achieved by Perrys Advance Accident Repair in accordance with PAS 2060:2014 at 1st January 2023 with commitment to maintain to next qualifying date: 31st December 2023 for the period commencing 1st January 2022, Purchase Direct Ltd other party certified."

Sign: Name: GREENVILLE TAYLORPosition: BODY SHOP MANAGERDate: 13TH NOVEMBER 2023

For and on behalf of Perrys Advance Accident Repair.

As the second declaration of commitment, this QES contains all the required information on the carbon neutrality of the given subject, and has been made publicly available via Perrys Advance Accident Repair's website.

3.0: Introduction

This document forms the Qualifying Explanatory Statement to demonstrate that Perrys Advance Accident Repair has achieved carbon neutrality. The carbon footprint has been quantified in accordance with PAS 2060:2014 and carbon credits purchased to offset the residual carbon footprint. This has been made publicly available via Perrys Advance Accident Repair's website.

Perrys Advance Accident Repair has a carbon management plan in place to reduce their carbon intensity footprint and demonstrate commitment to being carbon neutral in accordance with PAS 2060:2014 until the calendar year end of 2023.

Table 1 documents PAS 2060:2014 required information for a QES supporting a declaration of commitment and achievement of carbon neutrality.

Table 1: PAS 2060:2014 Qualifying Explanatory Statement Information Summary

| PAS 2060:2014 Information Requirement | Information as it relates to Perrys East Midlands T/A Advance Accident Repair |
|--|---|
| Entity making PAS 2060:2014 declaration | Perrys Advance Accident Repair |
| Subject of PAS 2060:2014 declaration: | The bodyshops, offices and fleets operated by Perrys Advance Accident Repair. |
| Individual(s) responsible for the evaluation and provision of data necessary for the substantiation of the declaration (including that of preparing, substantiating, communicating and maintaining the declaration) | Grenville Taylor, Perrys Advance Accident Repair Purchase Direct Ltd |
| Function of Subject: | Perrys Advance Accident Repair is an accident repair centre, providing a full range of services in vehicle collision and body repair. |
| Activities required for the subject to fulfil its function | The activities required to provide automotive vehicle servicing and repair include; <ul style="list-style-type: none"> Collision repair, wheel rim repair, dent repair/ paintless dent removal, air conditioning, vehicle diagnostics, paint scratch repair, glass replacement, tyre installation and wheel alignment. |
| Rationale for selection of the subject: | The scope and subject of this PAS2060 includes all emissions based on the operational control principle defined in the 2015 WRI GHG Protocol – Corporate Accounting and Reporting Standard ² . This enables the business to have direct influence over the reduction of emissions and take necessary steps to achieving carbon neutrality. |
| Type of conformity assessment has been/is to be undertaken | OVP-3 – Other party validated - unified |
| Baseline date for PAS 2060:2014 programme | 1 st January 2021 |
| Achievement Period | 1 st January 2022 – 31 st December 2022 |
| Qualifying Date | 1 st January 2023 |
| Commitment Period | 1 st January 2023 - 31 st December 2023 |

² WBCSD-WRI GHG Protocol – Corporate Accounting and Reporting Standard:
<https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf>

This Qualifying Explanatory Statement contains information pertaining to the subject's carbon neutrality and has been collated and reviewed by Purchase Direct Ltd as other party validation. Any and all information herein is believed to be correct at the time of publishing. Should any information come to light that would affect the validity of the statements made, this document will be updated to accurately reflect the subject's current status with regards to carbon neutrality.

3.1: Scope

The achievement and commitment to maintain carbon neutrality covers all Scope 1 and Scope 2 greenhouse gas (GHG) emissions that arise from Perrys Advance Accident Repair's operations and Scope 3 emissions listed in Table 3. These emissions can be impacted through a Carbon Management Plan, detailed in 6.0: Carbon Footprint Management Plan.

Table 2 describes emission scopes and the activities that generate direct and indirect emissions.

Table 2: Emission Scope Description.

| GHG Protocol Scope | Definition |
|---|--|
| Scope 1 (Direct) GHG emissions | These include emissions from activities owned or controlled by the organisation that directly release emissions into the atmosphere. Examples of Scope 1 emissions include emissions from combustion in owned or controlled boilers, furnaces, vehicles; emissions from chemical production in owned or controlled process equipment. |
| Scope 2 (Energy indirect) GHG emissions | These include emissions released into the atmosphere associated with consumption of purchased electricity, heat, steam and cooling. These are indirect emissions that are a consequence of an organisation's activities, but which occur at sources they do not own or control. |
| Scope 3 (Other indirect) GHG emissions | Emissions that are a consequence of organisational actions, which occur at sources which are not owned or controlled by that organisation and which are not classed as Scope 2 emissions. Examples of Scope 3 emissions are business travel by means not owned or controlled by the organisation, waste disposal which is not owned or controlled, or purchased materials. |

Scope 3 emissions beyond that stated in Table 3 are not included in this commitment to carbon neutrality because Scope 3 emission estimates are not reliable. Any further exclusion justifications can be found in Section

4.5 Exclusions. In line with PAS 2060:2014 guidance, selected emission sources estimated to contribute less than 1% of the total carbon footprint have also been excluded*. The total excluded emissions does not equate to more than 5% of the total carbon footprint. Where a single source contributes more than 50% of the total emissions, the 95% threshold has been applied to the remaining sources of emissions.

*Where accurate consumption data was available for scope 3 emissions which equate to <1% of the total footprint (e.g. weight, kWh etc). This is still included to represent the reliability of the data and prevent underestimation of the total carbon footprint.

Perrys Advance Accident Repair intends to follow the Carbon Neutrality timeline in accordance with **Error! Reference source not found.**

Figure 1 - Carbon Neutrality Timeline

3.2: Boundaries of subject

Perrys Advance Accident Repair is an accident repair centre, providing a full range of services in vehicle collision and body repair.

The declaration of carbon neutrality covers greenhouse gas (GHG) emissions relating to Perrys Advance Accident Repair's organisational boundary. The operational control approach has been used to define Perrys Advance Accident Repair's organisational boundary. All material emission sources required by PAS 2060:2014 standards have been reported for which Perrys Advance Accident Repair deems themselves responsible, with the exception of those that fall under the scope of the customer. The scope of the customer is defined by activities, services or products which are passed onto the customer either permanently or for a limited time and remain under their responsibility. Perrys Advance Accident Repair has no influence over the way the customer uses or disposes of these products or services and therefore falls outside of Perrys Advance Accident Repair's boundary.

The GHGs reported here relate to the location where Perrys Advance Accident Repair can employ their own operating policies and therefore wield the most control to reduce GHG emissions.

Perrys Advance Accident Repair have maintained records of all source data and calculations.

The definition of the subject will remain unchanged through each and every stage of the methodology. In the event that material change to the subject described above does occur, the sequence shall be re-started on the basis of a newly defined subject.

4.0: Carbon Footprint Assessment

4.1: Greenhouse Gas Emissions

All Scope 1 & 2 GHG emissions within Perrys Advance Accident Repair's organisational boundary, as outlined previously, are included and summarised in Table 3, alongside selected Scope 3 emissions.

Table 3: Scope 1, 2 & 3*³ GHG emissions

| GHG emissions 1st January 2022 to 31st December 2022 | | | |
|--|---|--------------------------|-----------------------------------|
| Scope | Emission source | Tonnes CO ₂ e | Percentage of Total Footprint (%) |
| Scope 1 - Direct emissions | Scope 1: Building Energy - Fossil Fuel Consumption | 104.62 | 32.1% |
| | Scope 1: Vehicle Fuel Combustion Emissions | 40.36 | 12.4% |
| | Scope 1: Subtotal (tonnes CO₂e) | 144.98 | 44.5% |
| Scope 2 - Indirect emissions | Scope 2: Purchased Electricity | 31.52 | 9.7% |
| | Scope 2: Subtotal (tonnes CO₂e) | 31.52 | 9.7% |
| Scope 3 - Other indirect emissions | Scope 3: Purchased Electricity Transmission & Distribution | 2.89 | 0.9% |
| | Scope 3: Well-to-tank Building Energy - Fossil Fuel Consumption | 17.83 | 5.5% |
| | Scope 3: Well-to-tank Vehicle Fuel - Fossil Fuel Consumption | 9.81 | 3.0% |
| | Scope 3: Water Supply and treatment | 0.20 | 0.1% |
| | Scope 3: Waste Disposal | 13.60 | 4.2% |
| | Scope 3: Manufacture of Paints, Varnishes & Ink | 36.62 | 11.2% |
| | Scope 3: Land transport services (3rd Party Recovery Vehicle Spend) | 68.06 | 20.9% |
| | Scope 3: Subtotal (tonnes CO₂e) | 149.01 | 45.8% |
| | Total GHG emissions (Scope 1 to 3) | 325.51 | 100.00% |
| | Annual Turnover (£m) | 4.88 | |
| | Intensity Ratio: Turnover (tCO₂e/£m) | 66.70 | |

4.2: Standard and Methodology

GHG emissions have been calculated in accordance with the WBCSD-WRI Greenhouse Gas Protocol - Corporate Accounting and Reporting Standard (revised edition, dated 2015), produced by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). This is a globally recognised standard and is best practice for a carbon footprint calculation. As stated by PAS 2060:2014, the GHG Protocol methodology can be presumed to meet the requirements of PAS 2060:2014.

Perrys Advance Accident Repair categorises its GHG Emissions as Scope 1, 2 or 3 as referred to in the WBCSD-WRI GHG Protocol (revised edition, dated 2015).

Carbon multipliers, fuel densities and calorific values have all been sourced from UK Government DEFRA's 2022 conversion factors⁴ (unless otherwise stated within backing data) and emissions have been expressed in terms of Carbon Dioxide Equivalent (CO₂e).

³ *selected scope 3 emissions estimated to account for 1% or more of the subject's total GHG emissions.

⁴ <https://www.gov.uk/government/publications/greenhouse-gas-reporting-conversion-factors-2022>

BEIS' 2022 weekly road fuel prices⁵ have been utilised where only fuel spend is available with additional factors from the International Energy Agency (2019) and Bitzer 20 for refrigeration gases.

Gas and electricity data has been collated by Perrys Advance Accident Repair's energy consultants (Purchase Direct Ltd) for all utility supplies across the company's estate. Perrys Advance Accident Repair have provided copy bills for those supplies currently outside of their remit.

The majority of vehicle fuel is purchased with fuel cards. The fuel card transactions have been cross referenced against fleet records, and card names and vehicle registrations analysed to identify, wherever possible, how the fuel has been used. Where fuel use could not be determined, it has been proportionately allocated across known fuel use categories. Each fuel use category has been further categorised as for business or given away, specifically with customer, courtesy or loan fuel considered to be given away. Only business fuel has been included in this carbon report. In some instances, it has been necessary to extrapolate fuel use from a sample month of data. Some fuel purchases have also been made outside of fuel cards and only spend data is available for these. In this instance, the spend has been allocated to the company vehicle assigned to the card holder during the date of purchase, and either petrol or diesel is assigned according to the vehicle in question. If the proportion of business mileage to personal mileage was not available, the subject estimated the proportion of business to personal mileage. It is noted that this brings about an element of uncertainty. These instances are documented. Annex C details the vehicle classifications used and relative descriptions.

It is noted that UK Government DEFRA's 2022 conversion factors⁶ utilise conversion factors based on the Net Calorific Value (NCV), as opposed to Gross Calorific Value (GCV) when converting mileage or kilometres into kWh. It is noted that this brings about an element of incompatibility with the rest of the Carbon Footprint Calculation and underestimation, as the remaining report uses calculations based on GCV.

Quantities of refrigeration top up during maintenance have been used as a proxy to estimate refrigerant leakage and relative GHG emissions.

All emission factors used within calculation methods have been noted within the backing data. Where specific emission factors for Scope 3 products and services are not yet available either within UK Government DEFRA's 2022 conversion factors, from the source, supplier, or within the relative industry, annual spend against Standard Industrial Classification (SIC) codes have been used. Relative emissions have been calculated using the Office for National Statistics' Atmospheric emissions: greenhouse gas emissions intensity by industry⁷. Every effort will be made to work with suppliers and manufacturers in order to obtain the most accurate emission factors in future.

Procured renewable electricity and gas is accounted in accordance with the WBCSD-WRI Scope 2 Guidance on procured renewable energy (2015).

The methodology employed minimises uncertainty and yields accurate, consistent and reproducible results whilst applying a conservative approach that precludes underestimation. The carbon footprint calculation is a best estimate based on reasonable costs and resources of evaluation.

⁵ <https://www.gov.uk/government/statistics/weekly-road-fuel-prices>

⁶ <https://www.gov.uk/government/publications/greenhouse-gas-reporting-conversion-factors-2022>

⁷ <https://www.ons.gov.uk/economy/environmentalaccounts/datasets/ukenvironmentalaccountsatmosphericemissionsgreenhousegasemissionsintensitybyeconomicsectorunitedkingdom>

4.3: Data Source

Primary and secondary data have been used to quantify the carbon footprint. Primary data has been used to quantify emissions wherever possible, with secondary data only used where primary data was not available.

4.4: Assumptions and estimations

Where it was not possible to obtain 12 months of actual consumption for gas (Scope 1) and electricity (Scope 2), and water (Scope 3) in order to determine relative GHG emissions, consumption was estimated. There are a number of methods which can be used for estimation of consumption;

1. Direct Comparison

If actual data for the benchmark data period is not available, actual data from an alternate, comparable period will be used if possible.

2. Pro-rata Extrapolation

Where some consumption data is available, an extrapolation method will be used to estimate 12 months of consumption. Where appropriate a seasonal profile will be applied to the extrapolation. Purchase Direct's seasonal profiles are calculated from actual consumption from around 150 other bodyshops they work with, these are:

| | Jan | Feb | Mar | April | May | June | July | Aug | Sep | Oct | Nov | Dec |
|-------------|-------|------|------|-------|------|------|------|------|------|-------|-------|-------|
| Electricity | 9.8% | 9.2% | 9.5% | 8.0% | 7.6% | 7.4% | 8.0% | 7.6% | 7.3% | 8.4% | 8.8% | 8.4% |
| Gas | 10.6% | 9.6% | 5.3% | 4.8% | 4.7% | 4.2% | 5.0% | 8.2% | 9.6% | 12.5% | 13.4% | 12.1% |

If it is not appropriate to apply the seasonal profiles a straight extrapolation will be used, for example 75,000kW consumed over 9 months would be extrapolated up to 100,000 kW. Extrapolated Annual Quantities (AQ) will be highlighted within the backing data.

3. Supplier Estimation

For mains electricity and gas, where there is insufficient data available, an estimated AQ will be taken from the supplier. A supplier estimated AQ will be highlighted within the backing data.

4. Benchmarking

This method will only be used where there is little or no consumption data available and no supplier estimate available. A site of similar size and with similar services/functions will be selected and it's AQs used as estimate figures. Benchmarking estimations will be highlighted within the backing data.

Quantities of refrigeration top ups during maintenance have been used to estimate refrigerant leakage and relative GHG emissions. It was assumed that the equivalent amount topped up is equivalent to the amount of refrigerant leaked and is used as a proxy in the calculations. Where quantities of refrigeration top up were not available but a top up during maintenance has been confirmed, this was estimated in line with industry research, including that of Chapter 5 of the IPCC/TEAP Special Report: Safeguarding the Ozone Layer and the Global Climate System⁸ and 2002 Report of the Refrigeration, Air Conditioning and Heat Pumps Technical Options Committee⁹.

⁸ IPCC/TEAP Special Report: Safeguarding the Ozone Layer and the Global Climate System. Chapter 5 : Residential and Commercial Air Conditioning and Heating . Available at : <https://archive.ipcc.ch/pdf/special-reports/sroc/sroc05.pdf>

⁹ 2002 Report of the Refrigeration, Air Conditioning and Heat Pumps Technical Options Committee. Available at : <https://wedocs.unep.org/bitstream/handle/20.500.11822/7796/47.pdf?sequence=2&isAllowed=y>

GHG emissions intensity figures within the Office for National Statistic's Atmospheric emissions: greenhouse gas emissions intensity by industry, were calculated by dividing the level of GHG emissions by Gross Value Added (GVA). GVA is defined as "the difference between output and intermediate consumption for any given industry"¹⁰. It is noted that the data obtained from Perrys Advance Accident Repair is the annual spend within the SIC Code category, and not the GVA. As the GVA is unknown for the supplier or sector for each category and is not feasible or practicable to calculate, the GHG emissions across these categories use annual spend and therefore are an overestimation of GHG emissions.

Where economic value information was not available during application of the spend-based methodology (see Technical Guidance for Calculating Scope 3 Emissions Supplement to the Corporate Value Chain (Scope 3) Accounting & Reporting Standard (version 1.0)^{*11}), Perrys Advance Accident Repair have provided an estimation of annual spend for various elements. This has been documented within the backing data.

Where meter reads/consumption figures are not available for waste water SPIDs, a proportion of the supply SPID consumption is assumed to be waste water. This is based on supplier standards at the date of calculation and is noted in the backing data.

Where actual weight data was unavailable for waste collections, supplier estimated weights have been used based on the container capacity. This has been noted in the backing data.

Due diligence checks on the calculations have been performed by Purchase Direct Ltd. When calculating indirect emissions (Scope 3), the following assumptions have been made. The following list of Scope 3 categories is not exhaustive, and only lists appropriate assumptions:

Business Travel - Rail

- Reported distances have been calculated based on distance between stations as the crow flies.
- Where only spend on business travel by rail was available without distance travelled, distance has been calculated using an average of distance (km) per pound (£) spend across other journey details where this information was available. An average km/£ was applied to the spend with unknown distance to calculate journey distance. Journeys were also assumed to be return journeys for 1 passenger. The limitations of this methodology are acknowledged and have only been used where limited data was available.

Business Travel – Underground

- Reported distances have been calculated based on distance between stations along underground tube lines.
- Where only spend on business travel by Underground was available without distance travelled, distance was calculated using the lowest £/km value across a sample of 5 underground journeys within Zone 1, and applied to the known cost spend on travel. The lowest £/km value was chosen because this gives the greatest possible distance travelled and avoids underestimation.
- Journeys are based on a Single Adult Journey, using Oyster or Contactless.

Business Travel – Land

¹⁰ Office for National Statistic's Atmospheric emissions: greenhouse gas emissions intensity by industry:
<https://www.ons.gov.uk/economy/environmentalaccounts/datasets/ukenvironmentalaccountsatmosphericemissionsgreenhousegasemissionsintensitybyeconomicsectorunitedkingdom>

^{11*} https://ghgprotocol.org/sites/default/files/standards/Scope3_Calculation_Guidance_0.pdf

- Where only spend on business travel by land was available without distance travelled, distance has been calculated using the spend and East Herts Council Table of Fares for Hackney Carriages from 1 July 2018 (current version).
- Uber and Taxi journeys have been assumed to be outside of London, unless otherwise stated.

Business Travel – Air

- Reported distances have been calculated based on distance between airports as the crow flies.
- “Average passenger class” has been assumed for Long haul flights to/from the UK.

Road Transportation

- Reported distances from third party contractors have been assumed to be return trips where the entire journey is average laden.

Waste

- Average mass of waste tyres was assumed using the Used Tyre Working Group (UTWG) average mass per tyre as stated in UK Used Tyre Working Group (2018) UK Used Tyre Mass Balance 2017.
- Mineral Oil emission factors have been used for any waste oil disposal. This is because an emission factor for synthetic engine oil not yet available, and mineral oil has similar properties.

Scope 3 emissions quantified by SIC Code

- Annual spend across certain SIC code categories was assumed to make up a minimal proportion of total spend for an automotive bodyshop. In addition, the Greenhouse gas emissions intensity of certain SIC code categories indicates that an automotive bodyshop is unlikely to be a large emitter in this category. Therefore, the associated Scope 3 emissions of certain SIC code categories have been assumed to be not material. This assumption has been based upon annual analysis and invoice audits across 200 automotive bodyshop sites undertaken by Purchase Direct over the past 5 years as part of their reputable procurement and cost reduction consultancy activities, as well as analysis of the ONS Greenhouse gas emissions intensity factors by industry.

4.5 Exclusions

Annex A outlines all inclusions and exclusions for GHG emissions.

In line with PAS 2060:2014 guidance, emission sources estimated to contribute less than 1% of the total carbon footprint have also been excluded. The total excluded emissions does not equate to more than 5% of the total carbon footprint. Where a single source contributes more than 50% of the total emissions, the 95% threshold has been applied to the remaining sources of emissions.

Perrys Advance Accident Repair have confirmed there are no stored or bulk fuels and no grey fleet consumption to be incorporated.

5.0: Carbon Offset Strategy

Perrys Advance Accident Repair have purchased carbon credits to offset 100% of residual GHG emissions defined by the boundary of the subject (Table 3), in order to achieve carbon neutrality for the second application period. Under PAS 2060:2014 standards, the offsetting methodology and credits meet the following principles:

- Credits generated or allowance credits surrendered represent genuine, additional GHG emission reductions elsewhere.
- Projects involved in delivering carbon credits meet the criteria of additionality, permanence, leakage and double counting.
- Carbon credits are verified by an independent third party verifier.
- Credits from carbon offset projects are only issued after the emission reduction associated with the offset project has taken place.
- Credits from carbon offset projects are retired within 12 months of the date of the declaration of achievement.
- Credits from carbon offset projects are supported by publicly available project documentation on a registry or equivalent publicly available record, which provides information about the offset project, quantification methodology and validation and verification procedures.
- Credits from carbon offset projects are stored and retired in an independent and credible registry or equivalent publicly available record.

Perrys Advance Accident Repair has chosen to offset through the following project.

Project Details:

- Project name: Combined cycle natural gas based grid connected power plant at Jegurupadu, India
- Location: India, Asia
- Standard: Clean Development Mechanism (CDM)
- Reference number: VC30209/2023
- Volume of credits purchased: 326 CERs
- Carbon Offset: 326 tCO_{2e}
- Retirement registry: CDM Registry <https://offset.climateneutralnow.org/vchistory>
- Credits verified by UNFCCC secretariat (UN Climate Change)
- Time period over which credits have been generated: 26 Jul 12 - 25 Jul 22 (Fixed)
- Credits are valid for use in PAS 2060:2014 standard

More information about the project is available in Annex B. The cancellation of the credits has been publicly documented on Perrys Advance Accident Repair's website.

6.0: Carbon Footprint Management Plan

Perrys Advance Accident Repair is committed to achieving carbon neutrality for the application period of 01/01/2023 – 31/12/2023 in accordance with PAS2060:2014.

Perrys Advance Accident Repair aims to reduce the total carbon footprint intensity by 2% per year on an ongoing basis. This will be continually reviewed in line with Perrys Advance Accident Repair's aspirations and progress.

Carbon reduction actions will be assessed against performance annually, with corrective action being implemented should the reduction target (declaration) not be met or actions not being in place.

6.1: Historical Emission Reduction Progress

Perrys Advanced Accident Repair implemented an Energy Management Programme from 1st October 2016. Using data loggers through Automatic Meter Read (AMR) meters on all gas and electricity supplies, data is provided to an Energy Advisor within Purchase Direct. The Energy Advisor is responsible for monitoring of this HH consumption data against a target, with any consumption patterns above target highlighted to the site's energy champion. Using previously conducted Energy Audits and knowledge of the site, the Energy Advisor is also able to provide advice on the likely cause of this excessive consumption to address and resolve the additional consumption. The consistent implementation of an efficient shutdown procedure is monitored by the Energy Advisor. Energy saving measures identified from Energy Audits have been implemented such as optimisation of lighting controls, boiler controls and other gas fired heating systems.

Perrys Advanced Accident Repair's carbon footprint for the emission sources listed below is 159.88 tonnes CO₂e:

- Scope 1 Building Energy - Gas Consumption,
- Scope 2 Purchased Electricity,
- Scope 3 Well-to-tank (WTT) Building Energy - Gas Consumption,
- Scope 3 Purchased Electricity Transmission & Distribution (T&D)

The carbon footprint for the emission sources listed above has reduced by 38% against a 2015/16 baseline. Emission reductions over time can be seen in Figure 2. Alongside the efforts made to reduce consumption through the Energy Management Programme, it is noted that a reduction in the UK electricity grid carbon intensity has also assisted in this historical emission reduction.

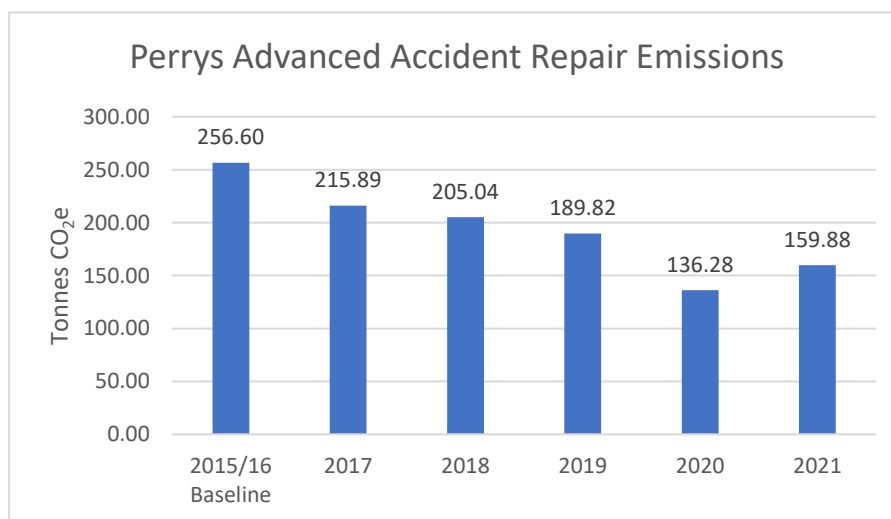

Figure 2: Perrys Advanced Accident Repair - Total Emissions over time for Scopes 1 Gas Consumption, Scope 2 Purchased Electricity, Scope 3 WTT Gas Consumption, and Scope 3 Purchased Electricity T&D. Note: 2020 emissions were significantly reduced due to the impact of Covid-19 on business operations.

Whilst basic historic emission reductions have been completed during several years immediately prior to the application period for other emission sources, the quantification of these reductions has not been completed due to the lack of reliable data. This lack of data includes the date for when these took place, and the quantification of the carbon reduction as a result. An estimation of emission reductions for these measures would be inaccurate and could result in overestimation. Therefore, emission reduction measures have not been included in quantification of the baseline Carbon Footprint, and are thought of as 'standard operational baseline practise' for the purposes of the baseline Carbon Footprint.

6.2: Emission Reduction Progress

Perrys Advance Accident Repair have achieved their 2% emissions intensity reduction target against their baseline carbon footprint (see figure 3). The methodology employed to quantify reductions was the same as that used to quantify the original carbon footprint. The total carbon footprint has seen an absolute increase against the baseline, however based on the rate of economic growth, an intensity reduction has still been achieved.

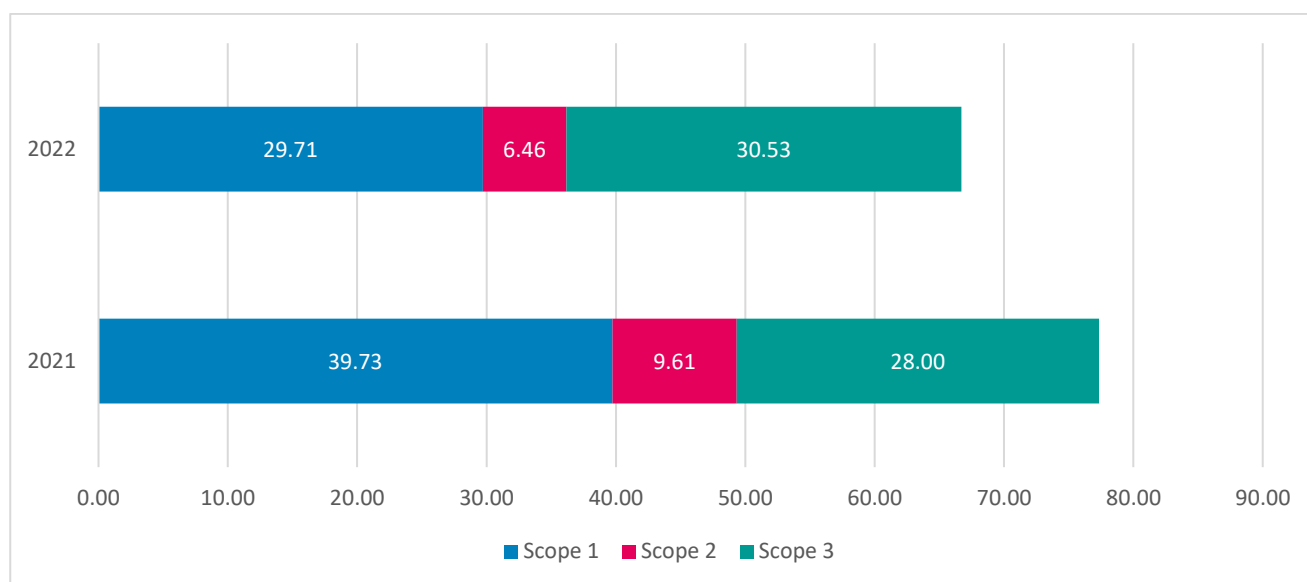

Figure 3 - CO2 Intensity Emissions Reduction (tCO₂e/£m turnover)

| | Scope 1 | Scope 2 | Scope 3 | Total |
|--|--------------|-------------|--------------|--------------|
| Baseline Emissions (tCO ₂ e) | 139.07 | 33.62 | 98.01 | 270.70 |
| Baseline Intensity (tCO₂e/£m turnover) | 39.73 | 9.61 | 28.00 | 77.34 |
| Submission 2 Emissions (tCO ₂ e) | 144.98 | 31.52 | 149.01 | 325.51 |
| Submission 2 Intensity (tCO₂e/£m turnover) | 29.71 | 6.46 | 30.53 | 66.70 |

| Turnover (£m) | |
|---------------|------|
| Baseline | 3.50 |
| Submission 2 | 4.88 |

Table 4 - Emissions Comparison

Perrys Advance Accident Repair has seen a 39% economic growth rate in the second application period, compared to the baseline. Therefore, they have seen an intensity reduction in their total carbon emissions of 16% (see table 4).

Implementing Emission reductions during this qualifying period was achieved by continuing to apply an energy management programme to improve staff engagement with energy consumption. In October 2022 a site re-visit was completed by Perrys Advance Accident Repair's Energy Consultant, Purchase Direct, to review on-site energy consumption and address any issues. The site has also implemented a full LED lighting upgrade across the site, alongside having an EV charger installed. The site is also currently implementing a partnership with a local equestrian facility to recycle their tyres which are used in protecting jumps and retaining walls.

Perrys Advance Accident Repair is committed to continued carbon reduction efforts through the carbon management plan (refer to section for details).

Further details of emissions reduction activities and opportunities can be found in Annex D.

6.3: Ongoing Emission Reduction Plan – For the PAS 2060:2014 Commitment Period

The on-going plan to reduce emissions over the commitment period is summarised below. These measures have been chosen as they represent the largest consumption areas across Perrys Advance Accident Repair's organisational boundary, and are feasible changes that Perrys Advance Accident Repair could implement to the business within the commitment period. In order to accurately calculate the emission reductions that these measures generate, the same methodology used to quantify the original Carbon Footprint shall be employed. Any assumptions, justifications or elements of uncertainty will be declared.

Energy Procurement

- Upon contract renewal, continue to investigate procurement of 100% renewable electricity contracts that are Renewable Energy Guarantees of Origin (REGO) backed.
- Upon contract renewal, continue to investigate Green Gas or carbon offset gas generation with UK suppliers.

Energy Management

- Continue to engage with Purchase Direct's Energy Management Programme, to maintain efficient operation of site's power, heating and lighting equipment.
- Investigate the implementation and review energy saving measures (including no cost, low cost and investment energy saving opportunities) identified during previously conducted Energy Audits and site visits which have not been addressed.
- Implement routine maintenance and repair of on-site equipment such as air compressors, air conditioning, spray booths and heating equipment.

Road Transportation

- Review opportunities to expand the electric vehicle fleet, further moving away from Internal combustion engine vehicles.

Waste Disposal

- Upon contract renewal, investigate and review waste streams with the intention to move to less GHG intensive waste disposal such as recycling.

Future Carbon Offsetting Strategy

- Following implementation of the reduction measures above, only then will Perrys Advanced Accident Repair implement Carbon Offsetting through carbon credits to offset any remaining GHG emissions.
- In line with the Carbon Reduction target, and assuming there is no change to operational procedures or the defined boundary, it is estimated that approximately 319 tonnes CO₂e will be required to offset.

- Carbon Credits will be purchased In line with the current offsetting strategy and methodology (as outlined in section 5.0: Carbon Offset Strategy) to align with PAS 2060:2014 standards, and the carbon credits purchased will equate to the required GHG emissions to be offset.

7.0: Annex

Annex A: Scope 1, 2 and 3 emissions inclusion and exclusion

| Emission Source | Description | Justification of exclusion (or inclusion as otherwise stated) |
|--|--|--|
| Purchased goods and services (upstream) | Extraction, production, and transportation of goods and services purchased | <p>Excluded: Emissions from the production of purchased goods such as parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements are not under the direct operational control of Perrys Advance Accident Repair, as Perrys Advance Accident Repair does not own or operate any manufacturing facilities that are responsible for production of these goods. These products are obtained from various sources globally, and therefore is not practicable or cost effective to quantify such emissions.</p> <p>Included: In contrast, the use of paint and bodyshop consumables have been included as these are <i>used</i> by Perrys Advance Accident Repair in order to carry out repair activities and is within Perrys Advance Accident Repair's control.</p> <p>Excluded: Unless otherwise advised of product use, portable fire suppression systems are assumed to be 'unconsumed'. At the end of the products life, the product is passed on to a third party for disposal (see waste generated in operations). For these reasons, portable fire suppression systems are excluded.</p> |
| Processing of Sold Intermediate Products | Transformation and inclusion of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements | <p>Excluded: The transformation of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements, have been excluded. With reference to PAS 2060:2014 Section 3.27 (Scope 3 emissions (other indirect)), these elements are not <i>used</i> by Perrys Advance Accident Repair, but rather are fitted and passed on to the end user, therefore Perrys Advance Accident Repair does not transform or process these elements.</p> <p>Included: In contrast, the use of paint and bodyshop consumables have been included as these are <i>used</i> by Perrys Advance Accident Repair in order to carry out repair activities and is within Perrys Advance Accident Repair's control.</p> |
| Use of sold products and services (downstream) | End use of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements. | <p>Excluded: The end user (customer) has control over how they utilise the product and it is not feasible, practicable or cost effective to measure and report and offset in the boundary, nor does Perrys Advance Accident Repair have control over this. In addition, these elements are not <i>used</i> by</p> |

PAS 2060:2014 Qualifying Explanatory Statement : Perrys Advance Accident Repair

| | | |
|---|--|---|
| | | Perrys Advance Accident Repair, but rather are fitted and passed on to the end user for use. |
| End-of-Life Treatment of Sold Intermediate Products | End-of-life treatment of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements. | Excluded: The waste-disposal behaviour of the end user (customer) is unknown, and one that Perrys Advance Accident Repair has no control over. Therefore, it is not practicable, feasible or cost effective to quantify such emissions. |
| Capital Goods | Fixed assets such as plant, property and equipment (PP&E). | Excluded: The emissions associated with much of Perrys Advance Accident Repair's PP&E is not practicable or cost effective to quantify such emissions. It is also not considered to be material. |
| Leased Assets (Upstream) | Operational of leased assets such as air compressors | Excluded: The non-combustion emissions of leased assets are not feasible, practicable or cost effective to measure and report. Included: Any operational combustion emissions are included within either Scope 1 or Scope 2 emissions. These would be impracticable to isolate and therefore, to prevent double counting, are included within Scopes 1 and 2 only. |
| Leased Assets (Downstream) | Courtesy Vehicles | Excluded: Non-combustion emissions from courtesy vehicles are not under the direct operational control of Perrys Advance Accident Repair, but rather are passed on to customers. It is not practicable or cost effective to quantify such emissions. |
| Fuel and Energy Related Activities | Employee energy consumption for remote based employees | Excluded: Some of Perrys Advance Accident Repair's employees may have flexible working arrangements (including part time, home based and shared office facilities). It is not practicable or cost effective to quantify such emissions and is subject to change. It is also not considered to be material. |
| Employee Commuting | Employee fuel consumption for the transportation of employees between their homes and worksites. | Excluded: Perrys Advance Accident Repair has employees with flexible work arrangements (i.e. part time, home based, shared office facilities) and different commuting profiles. It is not feasible, practical or cost effective to quantify. It is also highly subject to change due to the rate of employee turnover within the automotive bodyshop industry. It is also not considered to be material. |
| Transport and distribution (upstream) | Transportation of purchased materials or goods | Excluded: Transportation and distribution of products purchased by Perrys Advance Accident Repair between their site(s) and the supplier's is not considered to be material. |
| | Transportation of sold products | Excluded: Transportation of sold products is not considered to be material. Separating out Perrys Advance Accident Repair's own sold product transportation emissions from a single delivery by a third party vehicle that provides deliveries to a |

| | | |
|---|---|--|
| | | number of other organisations at the same time would also be impracticable to quantify. |
| | Transportation of waste | Excluded: Transportation of waste from sites is not considered to be material. Separating out Perrys Advance Accident Repair's own waste transportation emissions from a single collection trip by a third party vehicle that provides waste collection to a number of other organisations at the same time would also be impracticable to quantify. |
| Transport and distribution (downstream) | Transportation and distribution in vehicles and facilities not owned or controlled by Perrys Advance Accident Repair. | Excluded: Purchased transportation and distribution including that of third party owned recovery vehicles as well as any inbound logistics, outbound logistics between Perrys Advance Accident Repair's own facilities is considered to be not practicable or cost effective to quantify such emissions. |
| Waste Generated in Operations | Waste from fire suppression systems and antifreeze. | Included: Emissions from waste generation within Perrys Advance Accident Repair's boundary are included. Excluded: This is with the exception of fire suppression systems and antifreeze for which at the end of the products life, the product is also passed on to a third party for disposal. Emission factors associated with these methods for disposal are not readily available, and could be highly inaccurate if estimated. For these reasons the emissions associated with these elements are excluded. |
| Investment | Investments including equity and debt investments, project finance | Excluded: Perrys Advance Accident Repair's access to carbon emissions associated with investments are not feasible, practical or cost effective to quantify. They are also not considered to be material. |
| Tenant Activities | Any activities or processes which may need to be measured and separated against the subject's own carbon emissions, e.g. utility consumption or waste data. | Included: Where tenant emissions cannot be accurately defined/measured against the subject's own emissions in the form of invoice quantities or sub-meter reads, consumption will be included to avoid underestimation. Excluded: Where sufficient credible data is available to measure and separate tenant activities from the subject's carbon footprint, these emissions will be excluded as they fall outside of the subject's operational boundary and the subject has no influence on these activities. |

Annex B – Carbon offset credit certificate

Date: 25 OCTOBER 2023
REFERENCE: VC30209/2023

United Nations
Framework Convention on
Climate Change

VOLUNTARY CANCELLATION CERTIFICATE

Presented to

Perrys East Midlands T/A Advance Accident Repair

Project

Combined cycle natural gas based grid connected power plant at Jegurupadu, India

Reason for cancellation

I am offsetting greenhouse gas emissions for my company

Number of units
cancelled

326 CERs

Equivalent to 326 tonne(s) of CO₂

Start serial number: IN-5-279636429-2-2-0-5257
End serial number: IN-5-279636754-2-2-0-5257

The certificate is issued in accordance with the procedure for voluntary cancellation in the CDM Registry. The reason included in this certificate is provided by the cancellor.

Annex C - Vehicle Classifications

Vehicles within an Automotive Retail Bodyshop fall within the following classifications:

| | |
|-----------------|--|
| Company vehicle | Vehicles which are driven as company cars/vans by different members of staff while they are part of the company fleet. Company vehicles can also be used as demo vehicles for prospective customers to drive. |
| Courtesy | Customers who bring their personal vehicles in to be serviced may require the loan of a vehicle. Fuel consumed within courtesy vehicles is therefore outside the responsibility and influence of Perrys Advance Accident Repair. For this reason, courtesy vehicles are deemed within the customer's scope and are therefore excluded from the Carbon Footprint. Courtesy vehicles are usually rented from a third party leasing company and are returned after a period of time. |
| Demo | A vehicle that is used to demonstrate a make and model to a prospective buyer, wishing to purchase a new or used vehicle. These vehicles are mainly driven by members of the public who are prospective customers. Whilst this category is not often seen within Automotive Retail Bodyshop's fleets, there are occasions where exceptions occur, hence the reason for the category's inclusion. Perrys Advance Accident Repair are unable to control or influence the driving habits of customers or which vehicle they test drive, and for this reason are deemed within the customer's scope and are therefore excluded from the Carbon Footprint. The most efficient vehicles within a range/brand of vehicles are chosen as demonstrator vehicles. |
| Mobile Services | These vehicles provide a mobile service for vehicle repairs and maintenance. |
| Parts | Parts vehicles which make deliveries of stock to all Perrys Advance Accident Repair's locations. |
| Pool Car | Used as spare company vehicles or as run arounds. |
| Transporter | For collection and delivery of multiple vehicles, including vehicle recovery. |

Annex D – Emissions Reductions

Continued Improvement (PDCA)

| | CMP - Action 1 | CMP - Action 2 |
|---|---|---|
| Plan Problem identification, Problem analysis, Developing an experiment | Address site energy consumption and ensure the practices from the historic energy management programme have been maintained. | Reduce waste from scrap tyres |
| Do Develop and implement the solution to the problem | Purchase Direct site visit evaluation to identify areas for improvement, investment etc. | Develop an alternative disposal to landfill, i.e. recycling or reuse. Developing a partnership with an equestrian facility. |
| Check Did the implementation of the solution achieve the desired result? | Yes, several areas for improvement with regards to the site's energy consumption were identified. | To be confirmed in next carbon footprint calculation. |
| Act Document your results. Inform other about any potential process changes and recommendations for the future PDCA cycles. | A site visit report was provided to the site, summarising areas for improvement. This should be followed up in future PDCA cycles to measure progress against this report. Examples of identified improvements included lighting control, opportunity for LED upgrade, heating control and management, equipment control and management, and the potential for photovoltaic installation. | TBC. |

PAS 2060:2014 Qualifying Explanatory Statement : Perrys Advance Accident Repair

Annex E – Carbon Neutral Assurance Sign Off

By signing below, Purchase Direct confirms that Perrys Advance Accident Repair is Carbon Neutral in accordance with PAS 2060:2014, as outlined in the above documentation.

Sign: L. Neilson

Validator: Louise Neilson

Position: Sustainability Lead

Date: 31/10/2023

Sign: M. Woods

Auditor: Matt Woods

Position: Sustainability Advisor

Date: 02/11/2023

Both for and on behalf of Purchase Direct Ltd.

By signing below, the board level director for Perrys Advance Accident Repair confirms they

- are responsible for providing Purchase Direct with all data required to calculate GHG emissions within the organisational boundary;
- have reviewed the recommendations within this QES;
- are satisfied, to the best of their knowledge, that the information provided for the use within this QES is correct.
