1.0: Summary

Premier Accident and Repair Centre Ltd., from this point on will be referred to as Premier Accident and Repair, is a body shop group, providing a full range of services in vehicle collision and body repair. Undertaking work from private individuals, fleets, management companies and insurers, the scope of repairs range from passenger vehicles up to light commercial vehicles. Services include, but are not limited to, collision repair, wheel rim repair, dent repair/ paintless dent removal, air conditioning, vehicle diagnostics, paint scratch repair, glass replacement, tyre installation and wheel alignment.

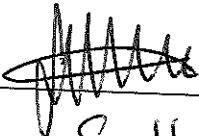

In 2024, Premier Accident and Repair achieved carbon neutrality for Scope 1 and 2 emissions and Scope 3 emissions estimated to be 1% or more of the total carbon footprint^{1*} (with the exception of those that fall under the scope of the customer), for the second year 1st January 2023 – 31st December 2023. The current commitment to maintain the status of carbon neutrality extends to 31st December 2024. This report, referred to as the Qualifying Explanatory Statement (QES), contains all the relevant documentation to support Premier Accident and Repair's commitment to and claim of achieved carbon neutrality as defined in PAS 2060:2014.

¹ ^{1*}Where accurate consumption data was available for scope 3 emissions which equate to <1% of the total footprint (e.g. weight, kWh etc). This is still included to represent the reliability of the data and prevent underestimation of the total carbon footprint.

2.0: Carbon Neutrality Declaration

"Carbon neutrality of Premier Accident and Repair's Scope 1 and 2 emissions and Scope 3 emissions estimated to be 1 % or more of the total carbon footprint (with the exception of those that fall under the scope of the customer), achieved by Premier Accident and Repair in accordance with PAS 2060:2014 at 1st January 2024 with commitment to maintain to 31st December 2024 for the period commencing 1st January 2022, Purchase Direct Ltd other party certified."

Sign: 
Name: Scott Rhodes
Position: Bodyshop Manager
Date: 26/09/24

For and on behalf of Premier Accident and Repair.

As the second declaration of commitment, this QES contains all the required information on the carbon neutrality of the given subject, and has been made publicly available via Premier Accident and Repair's website.

3.0: Introduction

This document forms the Qualifying Explanatory Statement to demonstrate that Premier Accident and Repair has achieved carbon neutrality. The carbon footprint has been quantified in accordance with PAS 2060:2014 and carbon credits purchased to offset the residual carbon footprint. This has been made publicly available via Premier Accident and Repair's website.

Premier Accident and Repair has a carbon management plan in place to reduce their carbon intensity footprint and demonstrate commitment to being carbon neutral in accordance with PAS 2060:2014 until the calendar year end of 2024.

Table 1 documents PAS 2060:2014 required information for a QES supporting a declaration of commitment and achievement of carbon neutrality.

Table 1: PAS 2060:2014 Qualifying Explanatory Statement Information Summary

PAS 2060:2014 Information Requirement	Information as it relates to Premier Accident and Repair Centre Ltd
Entity making PAS 2060:2014 declaration	Premier Accident and Repair Centre Ltd
Subject of PAS 2060:2014 declaration:	The two body shops, offices and fleets operated by Premier Accident and Repair.
Individual(s) responsible for the evaluation and provision of data necessary for the substantiation of the declaration (including that of preparing, substantiating, communicating and maintaining the declaration)	Phil Ashley, Premier Accident and Repair Centre Ltd Purchase Direct Ltd
Function of Subject:	Premier Accident and Repair Centre Ltd. is a body shop group providing a full range of services in vehicle collision and body repair.
Activities required for the subject to fulfil its function	The activities required to provide automotive vehicle servicing and repair include; <ul style="list-style-type: none"> Collision repair, wheel rim repair, dent repair/ paintless dent removal, air conditioning, vehicle diagnostics, paint scratch repair, glass replacement, tyre installation and wheel alignment.
Rationale for selection of the subject:	The scope and subject of this PAS2060 includes all emissions based on the operational control principle defined in the 2015 WRI GHG Protocol – Corporate Accounting and Reporting Standard ² . This enables the business to have direct influence over the reduction of emissions and take necessary steps to achieving carbon neutrality.
Type of conformity assessment has been/is to be undertaken	OVP-3 – Other party validated - unified
Baseline date for PAS 2060:2014 programme	1 st January 2022
Achievement Period	1 st January 2023 – 31 st December 2023
Qualifying Date	1 st January 2024
Commitment Period	1 st January 2024 - 31 st December 2024

² WBCSD-WRI GHG Protocol – Corporate Accounting and Reporting Standard:
<https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf>

This Qualifying Explanatory Statement contains information pertaining to the subject's carbon neutrality and has been collated and reviewed by Purchase Direct Ltd as other party validation. Any and all information herein is believed to be correct at the time of publishing. Should any information come to light that would affect the validity of the statements made, this document will be updated to accurately reflect the subject's current status with regards to carbon neutrality.

3.1: Scope

The achievement and commitment to maintain carbon neutrality covers all Scope 1 and Scope 2 greenhouse gas (GHG) emissions that arise from Premier Accident and Repair's operations and Scope 3 emissions listed in Table 3. These emissions can be impacted through a Carbon Management Plan, detailed in 6.0: Carbon Footprint Management Plan.

Table 2 describes emission scopes and the activities that generate direct and indirect emissions.

Table 2: Emission Scope Description.

GHG Protocol Scope	Definition
Scope 1 (Direct) GHG emissions	These include emissions from activities owned or controlled by the organisation that directly release emissions into the atmosphere. Examples of Scope 1 emissions include emissions from combustion in owned or controlled boilers, furnaces, vehicles; emissions from chemical production in owned or controlled process equipment.
Scope 2 (Energy indirect) GHG emissions	These include emissions released into the atmosphere associated with consumption of purchased electricity, heat, steam and cooling. These are indirect emissions that are a consequence of an organisation's activities, but which occur at sources they do not own or control.
Scope 3 (Other indirect) GHG emissions	Emissions that are a consequence of organisational actions, which occur at sources which are not owned or controlled by that organisation and which are not classed as Scope 2 emissions. Examples of Scope 3 emissions are business travel by means not owned or controlled by the organisation, waste disposal which is not owned or controlled, or purchased materials.

Scope 3 emissions beyond that stated in Table 3 are not included in this commitment to carbon neutrality because Scope 3 emission estimates are not reliable. Any further exclusion justifications can be found in Section

4.5 Exclusions. In line with PAS 2060:2014 guidance, selected emission sources estimated to contribute less than 1% of the total carbon footprint have also been excluded*. The total excluded emissions does not equate to more than 5% of the total carbon footprint. Where a single source contributes more than 50% of the total emissions, the 95% threshold has been applied to the remaining sources of emissions. Where accurate consumption data was available for scope 3 emissions which equate to <1% of the total footprint (e.g. weight, kWh etc). This is still included to represent the reliability of the data and prevent underestimation of the total carbon footprint.

Premier Accident and Repair intends to follow the Carbon Neutrality timeline in accordance with Figure 1.

Figure 1: Carbon neutrality timeline.

3.2: Boundaries of subject

Premier Accident and Repair is a body shop group, providing a full range of services in vehicle collision and body repair.

The declaration of carbon neutrality covers greenhouse gas (GHG) emissions relating to Premier Accident and Repair's organisational boundary. The operational control approach has been used to define Premier Accident and Repair's organisational boundary. All material emission sources required by PAS 2060:2014 standards have been reported for which Premier Accident and Repair deems themselves responsible, with the exception of those that fall under the scope of the customer. The scope of the customer is defined by activities, services or products which are passed onto the customer either permanently or for a limited time and remain under their responsibility. Premier Accident and Repair has no influence over the way the customer uses or disposes of these products or services and therefore falls outside of Premier Accident and Repair's boundary.

The GHGs reported here relate to the locations where Premier Accident and Repair can employ their own operating policies and therefore wield the most control to reduce GHG emissions.

Premier Accident and Repair have maintained records of all source data and calculations.

The definition of the subject will remain unchanged through each and every stage of the methodology. In the event that material change to the subject described above does occur, the sequence shall be re-started on the basis of a newly defined subject.

4.0: Carbon Footprint Assessment

4.1: Greenhouse Gas Emissions

All Scope 1 & 2 GHG emissions within Premier Accident and Repair's organisational boundary, as outlined previously, are included and summarised in Table 3, alongside selected Scope 3 emissions.

Table 3: Scope 1, 2 & 3*³ GHG emissions

GHG emissions 1st January 2023 to 31st December 2023			
Scope	Emission source	Tonnes CO ₂ e	Percentage of Total Footprint (%)
Scope 1 - Direct emissions	Scope 1: Building Energy	19.20	24.6%
	Scope 1: Vehicle Fuel	11.26	14.4%
	Scope 1: Welding Gases	0.01	<0.1%
	Scope 1: Subtotal (tonnes CO₂e)	30.47	39.0%
Scope 2 - Indirect emissions	Scope 2: Purchased Electricity	14.24	18.3%
	Scope 2: Subtotal (tonnes CO₂e)	14.24	18.3%
Scope 3 - Other indirect emissions	Category 1: Purchased Goods and Services	16.25	20.8%
	Category 3: Fuel and Energy-related Activities	7.17	9.2%
	Category 4: Upstream Transportation and Distribution	8.68	11.1%
	Category 5: Waste Generated in Operations	0.65	0.8%
	Category 8: Upstream Leased Assets	0.62	0.8%
	Scope 3: Subtotal (tonnes CO₂e)	33.38	42.7%
	Total GHG emissions (Scope 1 to 3)	78.10	100.0%
	Intensity Ratio: Turnover (tCO₂e/£m)	48.8	

4.2: Standard and Methodology

GHG emissions have been calculated in accordance with the WBCSD-WRI Greenhouse Gas Protocol - Corporate Accounting and Reporting Standard (revised edition, dated 2015), produced by the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI). This is a globally recognised standard and is best practice for a carbon footprint calculation. As stated by PAS 2060:2014, the GHG Protocol methodology can be presumed to meet the requirements of PAS 2060:2014.

Premier Accident and Repair categorises its GHG Emissions as Scope 1, 2 or 3 as referred to in the WBCSD-WRI GHG Protocol (revised edition, dated 2015).

Carbon multipliers, fuel densities and calorific values have all been sourced from UK Government DEFRA's 2023 conversion factors⁴ (unless otherwise stated within backing data) and emissions have been expressed in terms of Carbon Dioxide Equivalent (CO₂e).

³ *selected scope 3 emissions estimated to account for 1% or more of the subject's total GHG emissions.

⁴ [Greenhouse gas reporting: conversion factors 2023 - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/publications/greenhouse-gas-reporting-conversion-factors-2023)

BEIS' 2023 weekly road fuel prices⁵ have been utilised where only fuel spend is available with additional factors from the International Energy Agency (2019) and Bitzer 20 for refrigeration gases.

Gas and electricity data has been collated by Premier Accident and Repair's energy consultants (Purchase Direct Ltd) for all utility supplies across the company's estate. Premier Accident and Repair have provided copy bills for those supplies currently outside of their remit.

The majority of vehicle fuel is purchased with fuel cards. The fuel card transactions have been cross referenced against fleet records, and card names and vehicle registrations analysed to identify, wherever possible, how the fuel has been used. Where fuel use could not be determined, it has been proportionately allocated across known fuel use categories. Each fuel use category has been further categorised as for business or given away, specifically with customer, courtesy or loan fuel considered to be given away. Only business fuel has been included in this carbon report. In some instances, it has been necessary to extrapolate fuel use from a sample month of data. Some fuel purchases have also been made outside of fuel cards and only spend data is available for these. In this instance, the spend has been allocated to the company vehicle assigned to the card holder during the date of purchase, and either petrol or diesel is assigned according to the vehicle in question. If the proportion of business mileage to personal mileage was not available, the subject estimated the proportion of business to personal mileage. It is noted that this brings about an element of uncertainty. These instances are documented. Annex C details the vehicle classifications used and relative descriptions.

It is noted that UK Government DEFRA's 2023 conversion factors⁶ utilise conversion factors based on the Net Calorific Value (NCV), as opposed to Gross Calorific Value (GCV) when converting mileage or kilometres into kWh. It is noted that this brings about an element of incompatibility with the rest of the Carbon Footprint Calculation and underestimation, as the remaining report uses calculations based on GCV.

Quantities of refrigeration top up during maintenance have been used as a proxy to estimate refrigerant leakage and relative GHG emissions.

All emission factors used within calculation methods have been noted within the backing data. Where specific emission factors for Scope 3 products and services are not yet available either within UK Government DEFRA's 2023 conversion factors, from the source, supplier, or within the relative industry, annual spend against Standard Industrial Classification (SIC) codes have been used. Relative emissions have been calculated using the Office for National Statistics' Atmospheric emissions: greenhouse gas emissions intensity by industry⁷. Every effort will be made to work with suppliers and manufacturers in order to obtain the most accurate emission factors in future.

Procured renewable electricity and gas is accounted in accordance with the WBCSD-WRI Scope 2 Guidance on procured renewable energy (2015).

The methodology employed minimises uncertainty and yields accurate, consistent and reproducible results whilst applying a conservative approach that precludes underestimation. The carbon footprint calculation is a best estimate based on reasonable costs and resources of evaluation.

⁵ <https://www.gov.uk/government/statistics/weekly-road-fuel-prices>

⁶ [Greenhouse gas reporting: conversion factors 2023 - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/statistics/greenhouse-gas-reporting-conversion-factors-2023)

⁷ <https://www.ons.gov.uk/economy/environmentalaccounts/datasets/ukenvironmentalaccountsatmosphericemissionsgreenhousegasemissionsintensitybyeconomicsectorunitedkingdom>

4.3: Data Source

Primary and secondary data have been used to quantify the carbon footprint. Primary data has been used to quantify emissions wherever possible, with secondary data only used where primary data was not available.

4.4: Assumptions and estimations

Where it was not possible to obtain 12 months of actual consumption for gas (Scope 1) and electricity (Scope 2), and water (Scope 3) in order to determine relative GHG emissions, consumption was estimated. There are a number of methods which can be used for estimation of consumption;

1. Direct Comparison

If actual data for the benchmark data period is not available, actual data from an alternate, comparable period will be used if possible.

2. Pro-rata Extrapolation

Where some consumption data is available, an extrapolation method will be used to estimate 12 months of consumption. Where appropriate a seasonal profile will be applied to the extrapolation. Purchase Direct's seasonal profiles are calculated from actual consumption from around 150 other bodyshops they work with, these are:

	Jan	Feb	Mar	April	May	June	July	Aug	Sep	Oct	Nov	Dec
Electricity	9.8%	9.2%	9.5%	8.0%	7.6%	7.4%	8.0%	7.6%	7.3%	8.4%	8.8%	8.4%
Gas	10.6%	9.6%	5.3%	4.8%	4.7%	4.2%	5.0%	8.2%	9.6%	12.5%	13.4%	12.1%

If it is not appropriate to apply the seasonal profiles a straight extrapolation will be used, for example 75,000kW consumed over 9 months would be extrapolated up to 100,000 kW. Extrapolated Annual Quantities (AQ) will be highlighted within the backing data.

3. Supplier Estimation

For mains electricity and gas, where there is insufficient data available, an estimated AQ will be taken from the supplier. A supplier estimated AQ will be highlighted within the backing data.

4. Benchmarking

This method will only be used where there is little or no consumption data available and no supplier estimate available. A site of similar size and with similar services/functions will be selected and it's AQs used as estimate figures. Benchmarking estimations will be highlighted within the backing data.

Quantities of refrigeration top ups during maintenance have been used to estimate refrigerant leakage and relative GHG emissions. It was assumed that the equivalent amount topped up is equivalent to the amount of refrigerant leaked and is used as a proxy in the calculations. Where quantities of refrigeration top up were not available but a top up during maintenance has been confirmed, this was estimated in line with industry research, including that of Chapter 5 of the IPCC/TEAP Special Report: Safeguarding the Ozone Layer and the Global Climate System⁸ and 2002 Report of the Refrigeration, Air Conditioning and Heat Pumps Technical Options Committee⁹.

⁸ IPCC/TEAP Special Report: Safeguarding the Ozone Layer and the Global Climate System. Chapter 5 : Residential and Commercial Air Conditioning and Heating . Available at : <https://archive.ipcc.ch/pdf/special-reports/sroc/sroc05.pdf>

⁹ 2002 Report of the Refrigeration, Air Conditioning and Heat Pumps Technical Options Committee. Available at : <https://wedocs.unep.org/bitstream/handle/20.500.11822/7796/47.pdf?sequence=2&isAllowed=y>

GHG emissions intensity figures within the Office for National Statistic's Atmospheric emissions: greenhouse gas emissions intensity by industry, were calculated by dividing the level of GHG emissions by Gross Value Added (GVA). GVA is defined as "the difference between output and intermediate consumption for any given industry"¹⁰. It is noted that the data obtained from Premier Accident and Repair is the annual spend within the SIC Code category, and not the GVA. As the GVA is unknown for the supplier or sector for each category and is not feasible or practicable to calculate, the GHG emissions across these categories use annual spend and therefore are an overestimation of GHG emissions.

Where economic value information was not available during application of the spend-based methodology (see Technical Guidance for Calculating Scope 3 Emissions Supplement to the Corporate Value Chain (Scope 3) Accounting & Reporting Standard (version 1.0)^{*11}), Premier Accident and Repair have provided an estimation of annual spend for various elements. This has been documented within the backing data.

Where meter reads/consumption figures are not available for waste water SPIDs, a proportion of the supply SPID consumption is assumed to be waste water. This is based on supplier standards at the date of calculation and is noted in the backing data.

Where actual weight data was unavailable for waste collections, supplier estimated weights have been used based on the container capacity. This has been noted in the backing data.

Due diligence checks on the calculations have been performed by Purchase Direct Ltd. When calculating indirect emissions (Scope 3), the following assumptions have been made. The following list of Scope 3 categories is not exhaustive, and only lists appropriate assumptions:

Business Travel - Rail

- Reported distances have been calculated based on distance between stations as the crow flies.
- Where only spend on business travel by rail was available without distance travelled, distance has been calculated using an average of distance (km) per pound (£) spend across other journey details where this information was available. An average km/£ was applied to the spend with unknown distance to calculate journey distance. Journeys were also assumed to be return journeys for 1 passenger. The limitations of this methodology are acknowledged and have only been used where limited data was available.

Business Travel – Underground

- Reported distances have been calculated based on distance between stations along underground tube lines.
- Where only spend on business travel by Underground was available without distance travelled, distance was calculated using the lowest £/km value across a sample of 5 underground journeys within Zone 1, and applied to the known cost spend on travel. The lowest £/km value was chosen because this gives the greatest possible distance travelled and avoids underestimation.
- Journeys are based on a Single Adult Journey, using Oyster or Contactless.

¹⁰ Office for National Statistic's Atmospheric emissions: greenhouse gas emissions intensity by industry:
<https://www.ons.gov.uk/economy/environmentalaccounts/datasets/ukenvironmentalaccountsatmosphericemissionsgreenhousegasemissionsintensitybyeconomicsectorunitedkingdom>

^{11*} https://ghgprotocol.org/sites/default/files/standards/Scope3_Calculation_Guidance_0.pdf

Business Travel – Land

- Where only spend on business travel by land was available without distance travelled, distance has been calculated using the spend and East Herts Council Table of Fares for Hackney Carriages from 1 July 2018 (current version).
- Uber and Taxi journeys have been assumed to be outside of London, unless otherwise stated.

Business Travel – Air

- Reported distances have been calculated based on distance between airports as the crow flies.
- “Average passenger class” has been assumed for Long haul flights to/from the UK.

Road Transportation

- Reported distances from third party contractors have been assumed to be return trips where the entire journey is average laden.

Waste

- Average mass of waste tyres was assumed using the Used Tyre Working Group (UTWG) average mass per tyre as stated in UK Used Tyre Working Group (2018) UK Used Tyre Mass Balance 2017.
- Mineral Oil emission factors have been used for any waste oil disposal. This is because an emission factor for synthetic engine oil not yet available, and mineral oil has similar properties.

Scope 3 emissions quantified by SIC Code

- Annual spend across certain SIC code categories was assumed to make up a minimal proportion of total spend for an automotive bodyshop. In addition, the Greenhouse gas emissions intensity of certain SIC code categories indicates that an automotive bodyshop is unlikely to be a large emitter in this category. Therefore, the associated Scope 3 emissions of certain SIC code categories have been assumed to be not material. This assumption has been based upon annual analysis and invoice audits across 200 automotive bodyshop sites undertaken by Purchase Direct over the past 5 years as part of their reputable procurement and cost reduction consultancy activities, as well as analysis of the ONS Greenhouse gas emissions intensity factors by industry.

4.5 Exclusions

Annex A outlines all inclusions and exclusions for GHG emissions.

In line with PAS 2060:2014 guidance, emission sources estimated to contribute less than 1% of the total carbon footprint have also been excluded. The total excluded emissions does not equate to more than 5% of the total carbon footprint. Where a single source contributes more than 50% of the total emissions, the 95% threshold has been applied to the remaining sources of emissions.

Premier Accident and Repair have confirmed there are no stored or bulk fuels and no grey fleet consumption to be incorporated.

5.0: Carbon Offset Strategy

Premier Accident and Repair have purchased carbon credits to offset 100% of GHG emissions defined by the boundary of the subject (Table 3), in order to achieve carbon neutrality for the first application period. Under PAS 2060:2014 standards, the offsetting methodology and credits meet the following principles:

- Credits generated or allowance credits surrendered represent genuine, additional GHG emission reductions elsewhere.
- Projects involved in delivering carbon credits meet the criteria of additionality, permanence, leakage and double counting.
- Carbon credits are verified by an independent third-party verifier.
- Credits from carbon offset projects are only issued after the emission reduction associated with the offset project has taken place.
- Credits from carbon offset projects are retired within 12 months of the date of the declaration of achievement.
- Credits from carbon offset projects are supported by publicly available project documentation on a registry or equivalent publicly available record, which provides information about the offset project, quantification methodology and validation and verification procedures.
- Credits from carbon offset projects are stored and retired in an independent and credible registry or equivalent publicly available record.

Premier Accident and Repair has chosen to offset through the following project.

Project Details:

- Project name: Combined cycle natural gas based grid connected power plant at Jegurupadu, India.
- Location: India
- Standard: Clean Development Mechanism (CDM)
- Reference number: VC34594/2024
- Volume of credits purchased: **79**
- Carbon Offset: 79 tCO₂e
- Retirement registry: CDM Registry <https://offset.climateneutralnow.org/vchistory>
- Credits verified by UNFCCC secretariat (UN Climate Change)
- Time period over which credits have been generated: 26/07/2012 – 25/07/2022
- Credits are valid for use in PAS 2060:2014 standard

More information about the project is available in Annex B. The cancellation of the credits has been publicly documented on Premier Accident and Repair's website.

6.0: Carbon Footprint Management Plan

Premier Accident and Repair is committed to achieving carbon neutrality for the application period of 01/01/2024 – 31/12/2024 in accordance with PAS2060:2014.

Premier Accident and Repair aims to reduce the total carbon footprint intensity by 2% per year on an ongoing basis. This will be continually reviewed in line with Premier Accident and Repair's aspirations and progress.

Carbon reduction actions will be assessed against performance annually, with corrective action being implemented should the reduction target (declaration) not be met or actions not being in place.

6.1: Emission Reduction Progress

Premier Accident and Repair have achieved their 2% emissions reduction target against their baseline carbon footprint (see figure 2). The methodology employed to quantify reductions was the same as that used to quantify the original carbon footprint. The total carbon footprint has seen a 20% absolute reduction against the baseline.

Figure 3: Scope 1, 2 and 3 emission reduction in comparison to the baseline.

A reduction in electricity and gas consumption has been achieved as a result of applying their energy policy to improve staff engagement with behavioural changes across the business. A logger was installed on the sites gas meter to allow for better visibility of usage to help identify waste energy consumption and potential leakages. Several behavioural changes were implemented, including optimising control of appliances.

The carbon footprint for the gas and electricity has reduced by **19%** against the 2022 baseline (see figure 3). This equates to an actual reduction of Premier Accident and Repair tonnes CO₂e.

Figure 3: Utilities-Based GHG Reductions

Premier Accident and Repair centre also renewed their waste contract, increasing the number of recycling bins on site. In addition, their new waste collection service aims to divert all general waste from landfill to be used as refuse derived fuel.

Figure 3: Waste Generated GHG Reductions

Premier Accident and Repair is committed to continued carbon reduction efforts through the carbon management plan (refer to section for details).

Evidence of review meetings and further details emissions reduction activities and opportunities can be found in Annex D.

6.2: Ongoing Emission Reduction Plan – For the PAS 2060:2014 Commitment Period

The on-going plan to reduce emissions over the commitment period is summarised below. These measures have been chosen as they represent the largest consumption areas across Premier Accident and Repair's organisational boundary, and are feasible changes that Premier Accident and Repair could implement to the business within the commitment period. In order to accurately calculate the emission reductions that these measures generate, the same methodology used to quantify the original Carbon Footprint shall be employed. Any assumptions, justifications or elements of uncertainty will be declared.

Energy Procurement

- Upon contract renewal, continue to investigate procurement of 100% renewable electricity contracts that are Renewable Energy Guarantees of Origin (REGO) backed.
- Upon contract renewal, continue to investigate Green Gas or carbon offset gas generation with UK suppliers.

Energy Management

- Investigate the installation of data loggers through Automatic Meter Read (AMR) meters on all gas and electricity supplies to provide access and visibility of HH data.
- Investigate the implementation of an Energy Audit to understand no cost, low cost and investment energy saving opportunities.
- Conduct a LED lighting survey and complete LED replacement of fittings in the workshop to reduce electricity consumption.
- Investigate the implementation of an Energy Management Programme. This would include the monitoring of energy consumption in relation to a baseline target to identify and correct increases in consumption.
- Implementation of a companywide energy reduction policy which aims to engage staff with behavioural changes across the business.
- Implement routine maintenance and repair of onsite equipment such as air compressors, air conditioning, spray booths and heating equipment.

Road Transportation

- Review opportunities to expand the electric vehicle fleet, further moving away from Internal combustion engine vehicles.
- Review onsite electrical infrastructure and supply capacity for the future implementation of Electrical Vehicle Charging infrastructure.

Increase Data Accuracy

- Investigate routes to obtain activity data for all emission sources currently calculated using the spend based methodology to increase data accuracy and allow for emission reduction measures to be implemented.

Council Grants

- Investigate local council grant opportunities to help fund carbon reduction initiatives at site.

Future Carbon Offsetting Strategy

- Following implementation of the reduction measures above, only then will Premier Accident and Repair implement Carbon Offsetting through carbon credits to offset any remaining GHG emissions.
- In line with the Carbon Reduction target, and assuming there is no change to operational procedures or the defined boundary it is estimated that approximately **76.53 tCO₂e** will be required to offset.
- Carbon Credits will be purchased In line with the current offsetting strategy and methodology (as outlined in section 5.0: Carbon Offset Strategy) in order to align with PAS 2060:2014 standards, and the carbon credits purchased will equate to the required GHG emissions to be offset.

7.0: Annex

Annex A: Scope 1, 2 and 3 emissions inclusion and exclusion

Emission Source	Description	Justification of exclusion (or inclusion as otherwise stated)
Purchased goods and services (upstream)	Extraction, production, and transportation of goods and services purchased	<p>Excluded: Emissions from the production of purchased goods such as parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements are not under the direct operational control of Premier Accident and Repair, as Premier Accident and Repair does not own or operate any manufacturing facilities that are responsible for production of these goods. These products are obtained from various sources globally, and therefore is not practicable or cost effective to quantify such emissions.</p> <p>Included: In contrast, the use of paint and bodyshop consumables have been included as these are <i>used</i> by Premier Accident and Repair in order to carry out repair activities and is within Premier Accident and Repair's control.</p> <p>Excluded: Unless otherwise advised of product use, portable fire suppression systems are assumed to be 'unconsumed'. At the end of the products life, the product is passed on to a third party for disposal (see waste generated in operations). For these reasons, portable fire suppression systems are excluded.</p>
Processing of Sold Intermediate Products	Transformation and inclusion of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements	<p>Excluded: The transformation of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements, have been excluded. With reference to PAS 2060:2014 Section 3.27 (Scope 3 emissions (other indirect)), these elements are not <i>used</i> by Premier Accident and Repair, but rather are fitted and passed on to the end user, therefore Premier Accident and Repair does not transform or process these elements.</p> <p>Included: In contrast, the use of paint and bodyshop consumables have been included as these are <i>used</i> by Premier Accident and Repair in order to carry out repair activities and is within Premier Accident and Repair's control.</p>

PAS 2060:2014 Qualifying Explanatory Statement: Premier Accident and Repair Centre Ltd

Use of sold products and services (downstream)	End use of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements.	Excluded: The end user (customer) has control over how they utilise the product and it is not feasible, practicable or cost effective to measure and report and offset in the boundary, nor does Premier Accident and Repair have control over this. In addition, these elements are not <i>used</i> by Premier Accident and Repair, but rather are fitted and passed on to the end user for use.
End-of-Life Treatment of Sold Intermediate Products	End-of-life treatment of parts, tyres, coolant, refrigerant, courtesy fuel and other vehicle elements.	Excluded: The waste-disposal behaviour of the end user (customer) is unknown, and one that Premier Accident and Repair has no control over. Therefore, it is not practicable, feasible or cost effective to quantify such emissions.
Capital Goods	Fixed assets such as plant, property and equipment (PP&E).	Excluded: The emissions associated with much of Premier Accident and Repair's PP&E is not practicable or cost effective to quantify such emissions. It is also not considered to be material.
Leased Assets (Upstream)	Operational of leased assets such as air compressors	Excluded: The non-combustion emissions of leased assets are not feasible, practicable or cost effective to measure and report. Included: Any operational combustion emissions are included within either Scope 1 or Scope 2 emissions. These would be impracticable to isolate and therefore, to prevent double counting, are included within Scopes 1 and 2 only.
Leased Assets (Downstream)	Courtesy Vehicles	Excluded: Non-combustion emissions from courtesy vehicles are not under the direct operational control of Premier Accident and Repair, but rather are passed on to customers. It is not practicable or cost effective to quantify such emissions.
Fuel and Energy Related Activities	Employee energy consumption for remote based employees	Excluded: Some of Premier Accident and Repair's employees may have flexible working arrangements (including part time, home based and shared office facilities). It is not practicable or cost effective to quantify such emissions and is subject to change. It is also not considered to be material.
Employee Commuting	Employee fuel consumption for the transportation of employees between their homes and worksites.	Excluded: Premier Accident and Repair has employees with flexible work arrangements (i.e. part time, home based, shared office facilities) and different commuting profiles. It is not feasible, practical or cost effective to quantify. It is also highly subject to change due to the rate of employee turnover within the automotive bodyshop industry. It is also not considered to be material.
Transport and distribution (upstream)	Transportation of purchased materials or goods	Excluded: Transportation and distribution of products purchased by Premier Accident and Repair between their site(s) and the supplier's is not considered to be material.

PAS 2060:2014 Qualifying Explanatory Statement: Premier Accident and Repair Centre Ltd

	Transportation of sold products	Excluded: Transportation of sold products is not considered to be material. Separating out Premier Accident and Repair's own sold product transportation emissions from a single delivery by a third party vehicle that provides deliveries to a number of other organisations at the same time would also be impracticable to quantify.
	Transportation of waste	Excluded: Transportation of waste from sites is not considered to be material. Separating out Premier Accident and Repair's own waste transportation emissions from a single collection trip by a third party vehicle that provides waste collection to a number of other organisations at the same time would also be impracticable to quantify.
Transport and distribution (downstream)	Transportation and distribution in vehicles and facilities not owned or controlled by Premier Accident and Repair.	Excluded: Purchased transportation and distribution including that of third party owned recovery vehicles as well as any inbound logistics, outbound logistics between Premier Accident and Repair's own facilities is considered to be not practicable or cost effective to quantify such emissions.
Waste Generated in Operations	Waste from fire suppression systems and antifreeze.	Included: Emissions from waste generation within Premier Accident and Repair's boundary are included. Excluded: This is with the exception of fire suppression systems and antifreeze for which at the end of the products life, the product is also passed on to a third party for disposal. Emission factors associated with these methods for disposal are not readily available, and could be highly inaccurate if estimated. For these reasons the emissions associated with these elements are excluded.
Investment	Investments including equity and debt investments, project finance	Excluded: Premier Accident and Repair's access to carbon emissions associated with investments are not feasible, practical or cost effective to quantify. They are also not considered to be material.
Tenant Activities	Any activities or processes which may need to be measured and separated against the subject's own carbon emissions, e.g. utility consumption or waste data.	Included: Where tenant emissions cannot be accurately defined/measured against the subject's own emissions in the form of invoice quantities or sub-meter reads, consumption will be included to avoid underestimation. Excluded: Where sufficient credible data is available to measure and separate tenant activities from the subject's carbon footprint, these emissions will be excluded as they fall outside of the subject's operational boundary and the subject has no influence on these activities.

Annex B – Carbon offset credit (retirement summary/ confirmations/
certificates)

United Nations
Framework Convention on
Climate Change

Date: 17 SEPTEMBER 2024
REFERENCE: VC34595/2024

**VOLUNTARY
CANCELLATION
CERTIFICATE**

Presented to
Premier Accident and Repair Centre Ltd.

Project
Combined cycle natural gas based grid connected power plant at Jegurupadu, India

Reason for cancellation
I am offsetting greenhouse gas emissions for my company

**Number of units
cancelled**

79 CERs
Equivalent to 79 tonne(s) of CO₂

Start serial number: IN-5-279646467-2-2-0-5257
End serial number: IN-5-279646545-2-2-0-5257
Monitoring period: 26-07-2012 - 01-10-2016

The certificate is issued in accordance with the procedure for voluntary cancellation in the CDM Registry. The reason included in this certificate is provided by the cancellor.

Annex C - Vehicle Classifications

Vehicles within an Automotive Retail Bodyshop fall within the following classifications:

Company vehicle	Vehicles which are driven as company cars/vans by different members of staff while they are part of the company fleet. Company vehicles can also be used as demo vehicles for prospective customers to drive.
Courtesy	Customers who bring their personal vehicles in to be serviced may require the loan of a vehicle. Fuel consumed within courtesy vehicles is therefore outside the responsibility and influence of Premier Accident and Repair. For this reason, courtesy vehicles are deemed within the customer's scope and are therefore excluded from the Carbon Footprint. Courtesy vehicles are usually rented from a third-party leasing company and are returned after a period of time.
Demo	A vehicle that is used to demonstrate a make and model to a prospective buyer, wishing to purchase a new or used vehicle. These vehicles are mainly driven by members of the public who are prospective customers. Whilst this category is not often seen within Automotive Retail Bodyshop's fleets, there are occasions where exceptions occur, hence the reason for the category's inclusion. Premier Accident and Repair are unable to control or influence the driving habits of customers or which vehicle they test drive, and for this reason are deemed within the customer's scope and are therefore excluded from the Carbon Footprint. The most efficient vehicles within a range/brand of vehicles are chosen as demonstrator vehicles.
Mobile Services	These vehicles provide a mobile service for vehicle repairs and maintenance.
Parts	Parts vehicles which make deliveries of stock to all Premier Accident and Repair's locations.
Pool Car	Used as spare company vehicles or as run arounds.
Transporter	For collection and delivery of multiple vehicles, including vehicle recovery.

Annex D – Emissions Reductions

Carbon Management Plan Review Meetings

Carbon Neutral Review Meeting Premier Accident Repair Centre Ltd.

Attendees:

Daniel Hollington	Sustainability Advisor	Purchase Direct
Matt Woods	Sustainability Lead	Purchase Direct
Scott Curbishley	Account Manager	Purchase Direct
Scott Rhodes		Premier Accident and Repair Centre
Phil Ashley		Premier Accident and Repair Centre

Meeting Agenda

- Premier Accident Repair Centre Ltd. has achieved Carbon Neutrality in accordance with PAS2060 for the 2022 calendar year.
 - Baseline Carbon Footprint – 80.95 tCO₂e

Scope	Tonnes CO ₂ e	% of Total Footprint
Scope 1: (tonnes CO ₂ e)	23.81	29.4%
Scope 2: (tonnes CO ₂ e)	14.93	18.5%
Scope 3: (tonnes CO ₂ e)	42.21	52.1%
Total GHG emissions (Scope 1 to 3)	80.95	100.00%

- Next Steps – Measuring 2023 carbon footprint.
 - Carbon Reduction Target for 2023 – 2%
 - Either – Absolute Reduction of 1.65 tCO₂e
 - OR – Intensity Reduction
 - Intensity Ratio for 2022 = 36.8 tCO₂e / £m

- Discuss actions implemented in 2023 to reduce carbon footprint.

Fleet Management:

- Reduced the number of courtesy cars by 3.
- Added one BEV to the fleet and are reviewing the addition of hybrids.

Waste Management:

- Renewed the waste contract with increased recycling bins. New waste supplier diverts waste to be used as RDF.

Energy Monitoring:

- Installed a gas logger.

Carbon Management Plan:

Site Energy Management:

- Review and investigate the installation of SMART (AMR) meters on all appropriate electricity and gas meters.
- Investigate implementing an energy audit to identify no-cost, low-cost, and investment energy-saving opportunities.

Lighting:

- Conduct an LED lighting survey and replace LED fittings across the site where feasible.
- Install PIR motion sensors in low-use and common areas to reduce electricity consumption from lighting.

Heating:

- Ensure heating controls are set in line with opening hours.
- Install destratification fans to circulate warm air in Bodyshop spaces, improving temperature distribution and reducing heat losses through roofs.

Site Equipment Energy Performance Review:

- Investigate energy-efficient alternatives when equipment is due for renewal.
- Conduct an air leak survey for compressors and fix leaks.
- Explore the use of fast bake paints.
- Ensure all site equipment is turned off when not in use.

Energy Procurement:

Investigate procuring 100% renewable electricity contracts that are Renewable Energy Guarantees of Origin (REGO) backed. **Site plans to investigate the procurement of REGOS.**

Road Transportation:

Review opportunities to further expand the electric vehicle fleet, further moving away from internal combustion engine vehicles.

Photovoltaics:

- Investigate installing Solar PV panels to reduce reliance on grid electricity (**Site does not own the building therefore this is not feasible**).

Annex E – Carbon Neutral Assurance Sign Off

By signing below, Purchase Direct confirms that Premier Accident and Repair is Carbon Neutral in accordance with PAS 2060:2014, as outlined in the above documentation.
